In response to the public health, economic and geopolitical crises, Armateurs de France and its members remain fully mobilised to keep the world turning. Here we take stock of the situation.
RENEWING, DEVELOPING AND MODERNISING A COMPETITIVE FRENCH FLEET

March 2022. With world events dominated by the conflict in Ukraine, Jean-Emmanuel Sauvée, chairman of Armateurs de France, Jean-Philippe Casanova, managing director, and Jean-Marc Lacave, his predecessor, look back on the past year and the first challenges of 2022.

I would like to recall that our strategic plan for the merchant navy that we drew up in 2020 contributed substantially to getting the Fontenoy du Maritime process afloat. Armateurs de France’s experts and members became actively involved in this collaborative programme aimed at consolidating France’s maritime power and promoting the French flag. As further proof of the Government’s political commitment to the shipping sector, it was President Macron himself who came to the Assises de l’économie de la mer in Nice in September 2021 to announce the main measures resulting from this major consultation. We, French shipowners, welcome the progress made on exemptions from wage costs, green asset over depreciation, the guarantee of Strategic Project Insurance and the training of seafarers, but we expect much more! This long-distance trip has not yet reached its destination port... This is why Armateurs de France last autumn asked for a Fontenoy steering and monitoring committee to be created to exchange, every week, with the staff of the Ministry of Marine Affairs. The points on our agenda include the work and missions, validated by the Prime Minister, on the evaluation of the tonnage tax, the implementation of alternative financing and crowdfunding tools, and changes to ship mortgage law.

Would you describe 2021 as a continuation of 2020?

JEAN-EMMANUEL SAUVÉE

Yes, and that much is true both at home and abroad. Firstly with the Covid crisis which persisted, with its many consequences for shipowners from all over the world. Whether it was the problem with crew changes, that of seafarer vaccination, or disruption to the supply chain, the effects of the pandemic were, and continue to be, challenges for the entire shipping community. All of this on a backdrop of the ecological and energy transition which remains the main priority of the shipping sector.

And this priority is reflected in the Fontenoy du Maritime process in France?

J.-E. S.

"OUR STRATEGIC PLAN FOR THE MERCHANT NAVY THAT WE DREW UP IN 2020 CONTRIBUTED SUBSTANTIALLY TO GETTING THE FONTENOY DU MARITIME PROCESS AFLAT."
What can we take away from the measures relating to financing?

JEAN-MARC LACAVE

The issue of ship financing is essential for shipowners because everything depends on their ability to renew, develop and modernise their fleets competitively. The Fontenoy process has helped progress to be made in a few areas, particularly in green over-depreciation or the compatibility of BPI insurances with the French tax-based leases. However, we must remain attentive to the proper implementation of those measures. And there are still several outstanding issues on financing: I could mention, for example, the retrofitting of existing ships and new ships financed with conventional loans as well as the tax-based leases. However, we must remain attentive to the proper implementation of those measures. And there are still several outstanding issues on financing: I could mention, for example, the retrofitting of existing ships and new ships financed with conventional loans under the ecological transition. Without forgetting the alternative financing means such as the certificate d’investissement maritime, which contributes to reducing the equity capital required from shipowners. Consequently, discussions must be pursued vigorously.

And social matters were also part of the discussions.

JEAN-PHILIPPE CASANOVIA

Social harmonisation between European flags is a recurrent demand of Armateurs de France so that our shipping companies can compete on equal terms with their competitors and the employment of French seafarers can develop within shipping companies. The Fontenoy work triggered debate between the European Union’s Member States. The symposium on social dumping to be held in La Rochelle in early 2022 is an illustration of this. I would also like to emphasise our satisfaction with regard to the extension of the support scheme for shipping companies, for a period of three years, to all navigation segments. We regret, however, that only ratings and junior officers are covered by this aid. Finally, we welcome the doubling of student numbers at the ENSM by 2027. There is a great need for officers, and we hope that the academy will be able to meet the target. In any case, Armateurs de France is fully mobilised to ensure the success of this measure and also continue the discussions initiated under the Fontenoy agreement on social promotion.

What about the third working group?

3.4.6. This working group entitled “Strengthening the French maritime industry for the benefit of all players in the maritime ecosystem” is a response to our desire for greater economic solidarity. Indeed, how can it be acceptable that today only 5% of the 350 million tonnes of goods that enter and leave our ports each year do so under the French flag? We are fighting to structure a targeted incentive policy aimed at developing the shipping and port industry in a continuous and operational dialogue between the players in the sector. Armateurs de France signed two joint declarations of reinforced economic solidarity at the last Assises de la mer: one with the shippers, our clients, represented by ALTF, and the other with the shipbuilding industry, our technical partners, represented by GICAN. The implementation of these charters is now underway.

Is this also an opportunity to highlight the contribution of the sector to the development of offshore renewable energy?

3.4.6. The Minister of Marine Affairs has a strong interest in this subject. Annick Girardin commissioned Frédéric Moncay de Saint-Aignan, Chairman of the French Maritime Cluster, who submitted a report to her in February 2022 highlighting the fact that maritime works and services, provided by specialised vessels and teams, make up a significant proportion of the value chain for offshore wind farms. This report contains a number of levers that could optimise the contribution of these operators to the development of wind farms in French waters. This is another topic of solidarity that Armateurs de France is closely monitoring.

Changes in the French administration were also on the agenda at Fontenoy. Were any key decisions made?

3.4.6. Indeed, and already in March 2022 we have witnessed the creation of the Directorate General for Maritime Affairs, fisheries and aquaculture (DG AMPA in French) under the authority of the Minister of Marine Affairs and the Minister of Agriculture and Food. This is further proof of France’s maritime ambition and a very positive signal for the profession, which will facilitate the development of the blue economy and jobs. This new central administration structure, headed by Eric Banel, former managing director of Armateurs de France, has more than 3,000 members of staff spread across the regions. It is fully focused on the sustainable development of maritime activities, as close as possible to the users of the sea and the coastal communities.

Do your formulations in your new document entitled “Fostering a new ambition for French shipping”, sent to the presidential candidates, therefore sum up the repercussions of the Fontenoy approach? to which Armateurs de France remains particularly attentive?

3.4.6. The results of the Fontenoy maritime process were only a temporary port call for us; we want to go further, and without delay. This is the whole idea of the “new ambition” that we submitted to the presidential candidates. The subject of shipping is still not prominent enough in the key issues,
DARE TO EXPLORE NEW WAYS

"WE MUST BE ABLE TO ACCELERATE THE RENEWAL AND GREENING OF OUR FLEET, WHICH IS THE ONLY WAY TO ACHIEVE THE EXTREMELY AMBITIOUS TARGETS SET BY THE IMO AND EUROPE.”

J.-P. C.

even though it is of critical importance! Let us remind ourselves that shipping is the backbone of world trade and international logistics chains: it handles nearly 90% of world freight transport and is essential for supply chains. Maritime services also provide high-added value for manufacturers and are highly strategic for France. These include, for example, wind energy services, offshore activities, and the laying and maintenance of submarine cables through which 99% of intercontinental Internet traffic passes!

And what are your expectations of the European Union, for which France has held the presidency since 1 January 2022?

J.-M. L.

It is a fantastic opportunity for us, just at a time when Europe is leading several initiatives under its Green Deal or in the employment field. France has already grasped this opportunity at the La Rochelle symposium on maritime employment and skills at the One Ocean Summit in Brest. The expectations of French shipowners have not changed: prevent distortions of competition with shipowners from other regions of the world, aim for social harmonisation for seafarers between European flags, and help to further the energy transition through sustained funding of research, innovation and the deployment of industrial solutions that meet new environmental requirements. All these issues deserve a decisive commitment from France, which the French Presidency of the European Union must encourage.

The International Maritime Organisation (IMO) also regulates your sector, in particular in the area of environmental protection. How do you coordinate these two levels of regulations?

J.-E. S.

Armateurs de France is totally committed to the decarbonisation of shipping, but shipowners need to be supported by specific means. Let’s not miss this opportunity of our time! This means that we must be able to accelerate the renewal and greening of our fleet, which is the only way to achieve the extremely ambitious targets set by the IMO and Europe. Over the last ten years, shipowners have stepped up their efforts to reduce their carbon footprint: reduced ship speed, optimised routes, improved hull, bulb and propeller design, electric assistance, recovery of sources of heat and cold, etc. However, the solutions to achieve total decarbonisation are not yet available: there is a need for a technological breakthrough and intensified R&D on alternative fuels (hydrogen, ammonia, etc.).

So does this mean a subtle balance?

J.-P. C.

It is essential that the Government accelerates this transition while ensuring that international and European regulations do not penalise the progress made by shipowners and harm European cabotage. As part of the European Green Deal in particular, the European Commission announced in July 2021 its intention to integrate shipping into the European carbon emissions trading system (ETS). However, French shipowners stress that it is essential to ensure that this mechanism guarantees that European fleets are competitive with their non-European competitors. Shipping must therefore be integrated into the ETS in such a way that the system is flexible, consistent and compatible with future IMO market measures aimed at reducing greenhouse gas emissions.

Above all, it is imperative to systematically promote the adoption of rules at IMO level, as international regulation will always be more effective than a collection of regional rules stacked upon one another.

The burning issue today is the conflict in Ukraine. What are the first impacts you can see on the sectors you represent?

J.-E. S.

This war has many consequences on our activities and those that worry us the most relate to our crews. First and foremost, their safety is an absolute priority! The seafarers are also facing problems including repatriation difficulties, work contract extensions, salary payment problems. Together with the international shipping community, we are doing our utmost to ensure that seafarers do not become collateral victims of this new crisis. To this end, Armateurs de France is closely following the work of the IMO with regard to the impacts of the conflict on shipping and crews, particularly in the Black Sea and the Sea of Azov. At a special session in early March 2023, we...
Fostering a new ambition for French shipping and maritime services

Because a competitive merchant fleet is essential to France’s strategic independence and economic influence, Armateurs de France proposes a new ambition for the shipping sector. This document, whose main points are listed below, was sent to all the candidates running in the French presidential election.

- Promote jobs in shipping to provide the French sector with a competitive and relevant flag. This sector relies first and foremost on seafarers who are renowned worldwide for their skills, but whose numbers must be increased. This can only be done within the framework of fair competition between flags and with asserted solidarity between economic players, with the aim of promoting the growth of the French maritime sector.
- Elevate French ports to a position of international excellence. The national port strategy must aim to give France a leading position in international trade as a gateway or hub for Europe, and to contribute to the country’s industrial and economic development.
- Strengthen the maritime potential of the overseas territories and communities. France’s maritime area is the second largest in the world and covers all the oceans. Its overseas territories hold substantial maritime potential, which must be strengthened to provide new prospects for economic development in these communities.
- Support the ecological transition of shipping. The merchant navy must make considerable investments to meet the targets set by the International Maritime Organisation (40% less CO2 emissions from ships by 2030 compared to 2008 per tonne transported) and the European Union’s Green Deal (55% less by 2030 and net zero carbon by 2050). The sector has strong potential for innovation and adaptation, and must therefore benefit from a regulatory framework and financing suited to its specificities.

This UN body stressed the need to preserve the integrity of maritime supply chains and ensure the safety and well-being of seafarers, notably by designating them as essential workers and guaranteeing their mobility. It also called for the establishment of a Blue Maritime Safety Corridor for the safe evacuation of mariners and ships in high-risk areas. Armateurs de France will remain attentive, for as long as is necessary, to the repercussions of this war on the everyday lives of our seafarers, who must be protected.

“Shipping is essential for our economy and its actors, who are spearheading its green transformation. Our organisation thus drafted various proposals which were submitted as part of the presidential debate at the beginning of 2022. As I supported them in front of the candidates and their representatives, I noticed that politicians were clearly interested in our sector, whose strategic role was particularly underlined during the Covid crisis. Faced with the stakes of international competitiveness and the challenge of energy transition, we were thus able to make the voice of our members heard and set out our big issues – in terms of training, financing, ecology, and port and overseas territory strategies. This exercise is designed to contribute to embodying, but above all to implementing, a new ambition for French shipping, and which we are preparing to renew after the parliamentary elections.”

Laurène Niamba, Head of institutional relations and legal affairs at Armateurs de France

The Covid-19 pandemic took an unprecedented toll on the lives of seafarers. In 2020, according to the United Nations (UN), 400,000 seafarers, almost a quarter of the total workforce, were stranded on board ships, unable to be repatriated. In 2021, despite a slight improvement in the health situation, the difficulties linked to the mobility of seafarers persisted and constituted a priority issue for shipowners.
ANNUAL REPORT 2021/2022

ARMATEURS DE FRANCE — 1514

DARE TO EXPLORE NEW WAYS

best practices, increasing collaboration between ship operators and charterers to prevent difficulties being exacerbated, and ensuring air connectivity between key maritime hubs. At the beginning of 2021, Armateurs de France also sent a letter to the Minister of Marine Affairs expressing its grave concern about the activity of seafarers and asking her to give them priority access to vaccines. In April, it subsequently wrote to the Prime Minister to again demand priority access to vaccinations for seafarers on ships flying the French flag. The organisation's perseverance bore fruit belatedly, as the French government only included seafarers among the priority groups for vaccination in early May.

In the summer of 2021, the entry into force of the health pass led to a new action by Armateurs de France: another letter addressed to the Minister of Marine Affairs to request, this time, the compulsory vaccination of seafarers in order to anticipate the unequal treatment of unvaccinated seafarers abroad during crew changes. The letter also called for the establishment of vaccination centres in French ports for all seafarers, regardless of their nationality or flag. Here again, this initiative was partly successful: foreign seafarers were able to be vaccinated on French soil.

Despite these actions, difficulties persist, the Covid crisis has not let up, and the conflict in Ukraine is also threatening the safety of seafarers. Armateurs de France is therefore not relenting in its efforts.

Ferry/cruise sector: an unprecedented crisis!

As key activities of France’s foreign trade, cruises, sea crossings and connections between mainland France and islands represent, in normal circumstances, more than 30 million passengers per year. Passenger transport alone accounts for about 20% of European shipping and Europe accounts for almost 25% of the world cruise market. Faced with an unprecedented drop in international tourism due to lockdowns and travel restrictions, the industry experienced a decline of up to 70% in passenger numbers and significant revenue losses. Having seen a strong growth dynamic prior to the pandemic, the cruise market is thus one of:

The United Nations described it as a humanitarian crisis, calling on Governments at its 75th General Assembly to grant seafarers key worker status to facilitate their passage across borders and return to their ports of embarkation, or simply to return home at the end of their mission. France was among the first countries to recognise this status for seafarers, and Armateurs de France warmly welcomed this initiative, hoping that it would contribute to improving the fragile situation of seafarers.

Key worker status for seafarers

Throughout this critical period, the organisation and shipping companies stepped up their efforts to ensure that crews could change over in optimal safety conditions and to guarantee seafarer well-being: diplomatic negotiations, organisation of flights, maritime hubs, wide scale deployment of testing, etc. To do so, it worked closely with the emergency response unit of the Guichet unique du Registre International Français (RIF), which proved extremely efficient at this sensitive time. Thanks to the RIF’s actions, 15,400 seafarers were able to transit through France, regardless of their nationality or that of their vessel.

In addition, Armateurs de France and its member companies signed the worldwide call in the form of a manifesto called the “Neptune Declaration on Seafarer Wellbeing and Crew Change”. Signed by more than 800 companies and organisations, the declaration aims to take action through four main actions: recognising seafarers as key workers and giving them priority access to vaccines, establishing gold standard health protocols based on existing Orange Marine

Inaugurated in 2021, DFDS’ Côte d’Opale is the longest cross-Channel ferry
It is also worth underlining the level of solidarity between shipowners. In September 2021, CMA CGM and Brittany Ferries signed a partnership aimed at making a substantial investment in the ferry company’s cross-Channel operations, and sharing experience in the field of liquefied natural gas propulsion. To continue to steer this sector towards a resilient and more sustainable future, at the end of 2021 the Minister of Marine Affairs launched a mission on the economic model of this market to provide the struggling companies with a forward-looking vision of this model.

At the same time, Armateurs de France calls for an ambitious support policy for the shipping sector during the public health crisis, the president reiterated his support for the company, the leading employer of French seafarers. “In Nice, at the Assises de l’économie maritime of the First Quaestor, Florian Bachelier. This is a great recognition for our company and its commitment to the energy transition, I thanked him for choosing Brittany Ferries and the Salamance as a partner for the One Ocean Summit.”

Every year, the Blue Charter Trophy (Trophée de la Charte Bleue) rewards a shipping company that has contributed to one or more aspects of sustainability—economic, social, environmental. Given the exceptional nature of 2020, marked by the COVID-19 crisis, Armateurs de France dedicated its 2021 Trophy to the crews, saluting their courage and unfailing commitment in the face of the difficulties caused by the public health crisis.

Nolwenn Cazé, second captain of Orange Marine, designated to represent all the crews, received the trophy from the Minister of Marine Affairs at the annual Armateurs de France gala evening at the end of 2021. After thanking the organisation and its members for this recognition, Nolwenn Cazé added: “I would like to remind everyone that for many seafarers, whatever their nationality, crew changes continue to pose problems today with the pandemic resuming and some people still encountering difficulties in getting vaccinated. Seafarers are still at the heart of the storm! Governments and national and international maritime organisations must therefore continue their mobilisation on the issue, so that seafarers can at last perform their strategic missions in the best conditions.”

To mark this tribute, Armateurs de France made a donation to the Fédération Nationale des Associations d’Accueil des Marins (National Federation of Seamen’s Associations) to give telephone cards to seafarers to stay in touch with their families. On 25 June, International Day of the Seafarer, volunteers from the 20 Seamen’s Clubs in France, accompanied by representatives of the trade organisation, handed out these cards to seafarers who were moved by this gesture of solidarity.
The public health crisis caused major disruption to the logistics industry and to freight shipping. The imbalance between the high demand from developed economies for imported goods and the supply of effective transport capacity resulted in higher freight rates.

This imbalance, which affected all modes of transport, was aggravated by certain factors inherent in the crisis: shortage of raw materials, slowdown in production, labour shortfall and disruptions in ports, pressure on land transport modes, etc. In this unprecedented context, the French shipping companies CMA CGM and Marfret were quick to react. CMA CGM increased its shipping capacity by 5.8% in 2021 and its container fleet was also reinforced by 20% compared to June 2020. We adjusted our services, adding Le Havre to the rotation of our flagship Asia-Northern Europe route, in addition to Dunkirk, which was already served. We continue to mobilise additional space allocations between Asia and France, especially for SMEs. In addition, we froze our spot rates between Europe and the French West Indies/Guiana/Reunion/Mayotte from 1 May 2021.

CGM increased its shipping capacity by 9.1% between June 2020 and June 2021 and made more port calls in order to ease congestion. It also took the initiative of freezing freight rates for its short sea contracts between September 2021 and January 2022. Marfret pursued a policy of group investment and commitment to increase its owned transport capacity on its North-South routes. Two 2,500 TEU container ships, the Douce France and the Marius, have already been delivered. French shipping companies also played a more strategic role than ever for France by allocating additional capacity towards metropolitan France and maintaining continuous supplies to French overseas territories despite a drop in the volumes that were usually carried. To avoid imbalances in the long term, the French shipping and logistics organisations also decided to reinforce relationships based on trust. This intention resulted in the signing of a joint declaration by Armateurs de France and AUTF (Association of Freight Transport Users) in September 2021, witnessed by the Minister of Marine Affairs, Ms Annick Girardin.

CONCLUSION

In our group, we ensured our business continuity while working vigorously for the recognition of seafarers’ essential worker status.

“Whether they are used to transport raw materials, finished products, or oversized parcels, or to lay the submarine cables that are essential for connecting people, ships play a central role in globalisation.

Today, a large proportion of green energy is produced offshore with the tremendous growth in marine renewable energy. By disrupting economies and slowing down trade, the public health crisis highlighted the crucial role played by shipping and maritime services. In addition to the 90% of trade represented by maritime transport, 99% of the data exchanges generated by the internet pass through submarine cables. In our group, we ensured our business continuity while working vigorously for the recognition of seafarers’ essential worker status.

From an economic point of view, thanks to our historical expertise in dry bulk transport, we can offer an analysis of the market over the period. Firstly, this crisis had a very negative impact on the first five months of 2020. The BDI - Baltic Dry Index - indeed fell by half over this period. However, the various stimulus plans introduced by governments around the world then began to trigger an upturn in the economy from the summer of 2020 onwards. This catching up process was strongly amplified in the first three quarters of 2021. Between June and December 2020, the BDI rose by a factor of 2.5 and then by a factor of four between January and September 2021. The significant congestion in China, largely due to anti-Covid measures, is also an important explanation for this rise. However, from October 2021 onwards, the trend was reversed. As the catch-up had been too violent, a strong correction followed, amplified by a drop in activity in some heavy industries. The BDI was divided by four again. This drop in activity in bulk industries became worse again at the end of 2021 with what appears to have been the Chinese government’s desire to both purify the air before the Winter Olympics and limit price rises in certain raw materials.”

Antoine Person, Executive Vice President of Louis Dreyfus Armateurs group.

“The COVID-19 pandemic resulted in the disruption of global supply chains, with port congestion being the most visible effect in the containerised shipping sector. Since mid-2020, the logistics and freight transport industry has been facing a situation of imbalance between effective capacity and very strong demand. This situation continued into 2021.

Faced with this unprecedented situation, shipping lines, and CMA CGM in particular, responded by deploying all the solutions within their power. To serve its clients, CMA CGM increased its shipping capacity by 5.8% in 2021 and its container fleet was also reinforced by 20% compared to June 2020. We adjusted our services, adding Le Havre to the rotation of our flagship Asia-Northern Europe route, in addition to Dunkirk, which was already served. We continue to mobilise additional space allocations between Asia and France, especially for SMEs. In addition, we froze our spot rates between Europe and the French West Indies/Guiana/Reunion/Mayotte from 1 May 2021.

The pandemic thus underscored the need to accelerate the energy and digital transition of our industry. The CMA CGM Group has set itself the goal of being Net Zero Carbon by 2050. Since 2017, CMA CGM has chosen to invest in dual fuel vessels currently powered by liquefied natural gas (LNG). The engine installed on these vessels is also compatible with bio-LNG and synthetic methanes. CMA CGM Group will have a fleet of 44 e-methane ready vessels by the end of 2024.”

Jacques Gérault, International Advisor for shipping policy at CMA CGM.
TO EXPRESS CONVICTIONS

Defending French shipping is a matter of working towards the decarbonisation of the sector, attracting, training and retaining talent, and guaranteeing the safety of seafarers and fleets, all in a complex political environment. Here is an update on these different themes.
**THE TEAM AT ARMATEURS DE FRANCE**

*The sea is my passion! It is therefore an honour for me to become part of the French shipping team, this great family which I am so fond of. Shipping is a concentrate of big issues: environment, economics, social affairs, security, geopolitical events, etc., and French shipowners operate at the heart of maritime activities and even at the heart of their domestic and global economies. With the experts at Armateurs de France and its members, we are working at every level to develop the French fleet, one of the youngest, most modern, most diversified, safest, most innovative and cleanest fleets around!*  

Jean-Philippe Casanova, Managing Director of Armateurs de France

A new pilot for the Armateurs de France crew  

It is a first in the history of Armateurs de France since the arrival of the new managing director, there are two seafarers at the helm of the professional organisation. Jean-Philippe Casanova, a maritime pilot, now seconds Jean-Emmanuel Sauvée, the Chairman of the association since April 2020, to defend the interests of shipping and maritime services companies.

The background of Jean-Philippe Casanova  

He succeeded Jean-Marc Lacave as managing director of Armateurs de France in January 2022.  

A graduate of the École Nationale de la Marine Marchande (National Merchant Navy Academy), which he began attending in Marseille in 1990, he qualified as Captain 1st Class in Maritime Navigation (C1NM) and started his career as a maritime pilot at the Marseille/Fos pilot station in December 2001. He was elected Secretary General of the French Federation of Maritime Pilots in 2002, a position he held until 2011 before becoming its Chairman until July 2021. He is also a member of the Conseil Supérieur de la Marine Marchande and the Board of ENSM, and participates in IMO sessions as an advisor to the French delegation.

What our members say  

*"The French overseas territories and communities are a source of maritime power. Across all the oceans in the world, they are geostrategic vectors, providing France with a 10.8 million km² EEZ that is plentiful in resources that must be protected and harnessed by various economic sectors. The issues of overseas shipowners are continuously relayed by Armateurs de France. The organisation supports us, for example, in signing ships up to the French Flag Register amid fierce competition for transport between islands."*  

Roland Bellemare, Managing Director – L’Express des Îles

*"We work hand-in-hand with Armateurs de France to draw up and implement environmental best practices. The proactiveness of the team furthermore enabled Orange Marine to be among the first French companies to be awarded the Green Marine Europe label, which is a great source of pride for us!"*  

Didier Dillard, Managing Director – Orange Marine

*"Armateurs de France is a valuable intermediary when it comes to representing the local issues of shipping companies at national level. For example, the organisation spoke out on behalf of its members involved in the transport and extraction of aggregates to defend their interests in the public debate on floating wind farms in Southern Brittany, by drafting a stakeholder report."*  

Agnès Garçon, Mining Resources Officer – Sables de l’Atlantique

*"The action of Armateurs de France provides strong support for the deployment of the sail assistance solution among decision makers. Its experts work to promote this future-focused sector at many events and institutional speaking opportunities. They also provide us with essential assistance in implementing financial and administrative mechanisms suited to the use of wind energy in shipping."*  

Jean Zanuttini, President – Neoline

*"Offshore wind farms are developing at increasing speed in France and Europe. We need Armateurs de France to consolidate the competitiveness of our French offerings, be it on technical, environmental or social aspects, and thereby capture our full share of these markets."*  

Loïc Thomas, President – Thomas Services Maritimes

*"Within the social affairs committee of Armateurs de France, we work to maintain the excellence of French maritime training. The organisation perfectly represents the interests of shipowners, particularly with the French Maritime Academy (ENSM), and proves to be a valuable aid in exchanges with this institution."*  

Isabelle Daumas, Fleet Training Director – Ponant

*"We need Armateurs de France to consolidate the competitiveness of our French offerings, be it on technical, environmental or social aspects, and thereby capture our full share of these markets."*  

Marie-José Gharios, Communications Officer.
United to Better Protect The Environment

In November 2021, Brittany Ferries took delivery of its first LNG-powered vessel: the Salamanca.

For both today and tomorrow, Armateurs de France and its members are more mobilised than ever to develop concrete solutions and reduce the environmental impact of their activities. This is illustrated in two key concerns: reducing greenhouse gas (GHG) emissions and preserving biodiversity.

The Race to Zero Carbon

According to Armateurs de France, it is at the IMO, the regulatory body for maritime transport and services, that the sector’s regulations should be determined, particularly those aimed at reducing the environmental footprint of vessels. Consequently, after adopting the EEDI1 for new vessels in 2011, the IMO is accelerating the reduction of CO2 emissions from existing vessels, with two instruments due to come into force on 1 January 2023: the EEEX2, a technical measure, and the CI3 which focuses on the operational part of the vessel.

To achieve an overall reduction in GHG emissions from vessels, the IMO also aims to introduce a market-based measure such as a levy or ETS4, a fuel lifecycle regulation, and another to encourage the use of renewable and low-carbon fuels.

In 2018, the strategy adopted by the IMO was to halve GHG emissions by 2050 compared with 2008. Armateurs de France reiterates that it supports the inclusion of all GHGs in the revision of this strategy to be adopted in 2023. These ambitions are supported by those of the European Union and its regulatory package (fit for 55, see Europe chapter page 32).

15-20%:

the excess cost of greening ships to achieve low-carbon propulsion (dual fuel or LNG). This cost is much higher for a zero-carbon propulsion system.

During the One Ocean Summit, many commitments were made before the French President in favour of environmental protection by the shipping and maritime services sector: 22 shipowners signed up to the GME label, the designation of a SECA5 zone in the Mediterranean in 2025, the submission to the IMO of a PSSA6 in the Western Mediterranean and the launch of the T2EM7 MEET 2050 Institute. I welcome this French dynamic which illustrates the commitment of the entire maritime sector to reduce its impact on the environment. While vessel decarbonisation is a priority, we are not forgetting the importance of the issues related to biodiversity.

Nelly Grassin,
Head of quality and technical safety, security and environmental affairs at Armateurs de France

In this context, Armateurs de France represents French shipowners in the various bodies (ECSA8, ICS9, Permanent Representation of France to the IMO) and ensures that the measures adopted are in line with the specificities of shipping, without overlooking the availability of technologies and fuels at competitive costs. The organisation advises each of its members and regularly convenes them in its environmental committees, where information and best practices are exchanged, in workshops involving representatives of the Administration, and in webinars dedicated to technologies and future fuels.

During the One Ocean Summit in Brest, the Government and the maritime sector, brought together under the umbrella of the French Maritime Cluster, launched the MEET 2050 Institute to guide shipowners in the ecological and energy transition of their vessels. Shipowners will not be able to achieve the zero carbon objective on their own. There must be increased collaboration with all the players in the chain: from shipyards and energy providers to equipment manufacturers, shippers, ports, financiers... everyone must join forces! (See quote from Frédéric Pouget page 26).

The institute will assist shipowners in their technological choices: which energies and technologies, which storage and supply, at what cost and for what efficiency? Shipping companies are facing a major environmental challenge and need to be supported!

Green Marine Europe

Already in 2021, eleven shipowners10 signed up to Green Marine Europe (GME), a voluntary European certification programme. It is aimed at improving the environmental performance of ships based on eight criteria, among which pollutant and GHG emissions, underwater noise, waste and oil discharges, and ship recycling. To keep their label, shipowners are required to demonstrate progress on these criteria from one year to the next.
Having been deeply involved in the creation of this label, Armateurs de France is now working to develop and promote it. The organisation strongly believes in the importance of dialogue with environmental NGOs and the entire maritime industry to successfully achieve an ecological transition in maritime transport and services.

The organisation also sits on the Board of Administration of the Ocean & Climate Platform, a coalition committed to the preservation of the oceans, climate and biodiversity, and which promotes the label. Spearheaded by Surfrider Foundation Europe, GME is a label created by and for the industries, making it a powerful tool. Robust and ambitious, it guides shipowners in their daily work and highlights their positive impact initiatives: integration of wind, LNG powered vessels, speed reduction, particulate filters, reduction of underwater noise, etc. Armateurs de France actively contributes to the revision of the label’s criteria, and also takes part in the development and steering committees to support its members in the process.

In the belief that it is important to involve all stakeholders, Armateurs de France also held a lecture with Surfrider Foundation Europe at the World Impact Summit in Bordeaux in December 2021. The aim here was to raise public awareness of the environmental challenges of shipping and to encourage shipowners to sign up to GME. During the One Ocean Summit in Brest, GME announced eleven new candidates applying to receive the label in June 2022: CMA CGM, MAN, Michelin, Compagnie Polynésienne de transport maritime, Aranui cruises, Express des îles, Ilios, Louis Dreyfus Armateurs, MSC Croisieres, Plastic odyssey, SPM Ferries, Stena line and TOWT. As a first step in its European development, GME is also getting involved in the environmental proactivity of the entire maritime sector (labeling of shipyards), following the example of Green Marine, the North American label of which it is the European version.

Acting for biodiversity
As a cornerstone of the GME label, the preservation of biodiversity is a central concern for French shipowners, particularly as signatories of the Blue Charter, through which they undertake to provide responsible maritime transport and services. In 2021, Armateurs de France, together with government officials and IPAW, developed infographics to explain how shipping, which generate underwater noise, impact sea mammals. These tools also describe the commitments and efforts made by shipowners to reduce this impact. Furthermore, as a member of the French underwater noise community, the organisation participated in the national seminar on underwater noise in the Mediterranean last September in Toulon.

Armateurs de France is also closely following the ongoing revision of the 2014 IMO guidelines to ensure that effective and accessible measures are put in place for shipowners. A recent but notable project is QWIO², a project by the Wildlife Conservation Society to study and reduce the effects of underwater noise from ships on marine species in the Western Indian Ocean. Accompanied by the organisation, three shipowners - Buludua, Socatra and Ponant - decided to join the project and measure the acoustic impact of their activities in this area. The preservation of biodiversity occasionally requires the establishment of particular sensitive sea areas to avoid collisions with cetaceans. Such is the case in the western part of the Mediterranean Sea. Together, France, Monaco and Italy will submit a designation proposal to the IMO in December 2022. Armateurs de France will seek to ensure a global approach to the consequences of such a specification and the establishment of binding measures for vessels.
Stimulating social dialogue

Maintaining healthy industrial relations is an issue that features high up on the Armateurs de France agenda. As a leading figure in collective bargaining, the organisation gave fresh impetus in 2021 to the reorganisation of maritime occupational branches, and played a decisive role in the exchanges conducted on workplace accidents and occupational illnesses.

Armateurs de France was once again declared the only employer organisation to be representative in the sector’s three branches: offices, ratings and sedentary personnel – as confirmed by ministerial orders published at the end of 2021. This recognition means that Armateurs de France can continue to negotiate and conclude collective bargaining agreements in these professional branches. Building on this possibility, it aims to be proactive in the work initiated to merge the branches.

Bringing branches together: an unprecedented challenge

Initiated in 2015, the plans to merge branches in France aim to streamline a particularly fragmented collective bargaining landscape. The goal is to move from approximately 700 branches to 100 in the space of 10 years. While the Employment Act (Loi Travail) of 8 August 2016 offered a significant boost, the first ministerial order on mergers published in 2017 led to about 30 collective bargaining agreements merging into one. On 5 June 2019, a legal opinion was published on the merging of the collective bargaining agreements of the operating personnel of maritime transport and services companies, tugboat companies and waterway services. Following the issuance of this opinion, a representative trade union from the waterway branch exercised its right to object, so no order was published. The COVID-19 health crisis also slowed down the process. However, reducing the number of branches is still an important objective and the Directorate-General of Labour (DGGT) wishes to continue to bring them together. Consequently, all the parties involved in the merger have asked the Directorate-General for Labour for a reasonable period of time to negotiate. Nevertheless, the exchanges have slowed down in recent months, due to the lack of a response from the Administration and pending the publication of the orders on trade union representativeness in the Journal officiel. These decrees are essential, since they set the rules for the participation of employees’ unions in collective bargaining. They were eventually published in 2022, releasing the social partners from their state of limbo and allowing them to resume the talks that has been suspended.

Priority on concertation

Armateurs de France remains heavily invested in collective bargaining at branch level. In particular, it has raised the compensation of union representatives sitting on joint committees by concluding a dedicated agreement in the three branches it represents. These representatives must be given support to ensure the best possible environment for dialogue. In addition, the branches have been involved for several months in an Employment and Skills Development scheme with the support of DPCO Mobilités. Under this programme, they have already received a comprehensive diagnosis of the shipping sector. Finally, the sedentary personnel branch has just signed an agreement on teleworking following many months of discussions.

Sexual harassment and violence: time for action!

In every sector of activity, sexual harassment and violence against women continue to exist, and the shipping industry is unfortunately no exception. Armateurs de France has decided to fully commit itself to eradicating violence in the hope that this work will lead to the implementation of concrete actions. It will therefore be leading, together with a trade union representative, a joint working group set up by the Maritime Administration. It will also dedicate part of its social day to awareness-raising and prevention against these abuses. Finally, it supports the proposals made by the ILO on the subject, convinced that it is necessary to act quickly and decisively to put an end to this violence.

In close collaboration with its partners in France and abroad, Armateurs de France continues its unwavering commitment to maritime safety and security. It unites its members around the sharing of best practices and the search for new solutions.

In close collaboration with its partners in France and abroad, Armateurs de France continues its unwavering commitment to maritime safety and security. It unites its members around the sharing of best practices and the search for new solutions.

SECURITY AND SAFETY
COMMITED TO EXCELLENCE

Consolidating synergies with the French Navy and the Ministry of the Armed Forces remains a priority for Armateurs de France. And for good reason: last year, there were once again many threats to ship security: theft at anchor in South-East Asia, security issues in the Mozambique Channel, piracy and robbery in the Gulf of Guinea, with a peak in seafarer kidnappings in early 2021.

Seafarer security: an absolute priority

The organisation advocates a stronger naval presence in the Gulf of Guinea and deeper regional, European and international military cooperation. It welcomes the commitment of new European naval resources in the framework of the coordinated maritime presence, which must now be made permanent. At the same time, there must be greater communication of information on the location and use of the resources deployed by France to combat piracy.

Maritime intelligence and information sharing play a key role in preventing threats. Armateurs de France is a committed partner of the MICA Center and its teams, and thank them in particular for their initiatives for the benefit of French and foreign shipowners. The strengthening of voluntary naval cooperation and the widening of the scope of illegal activities monitored are also new synergies that provide the basis for closer collaboration between the merchant navy and the French Navy, particularly during major crises such as the Ukraine-Russia conflict, which is having a major impact on shipping traffic in the Black Sea at the time of writing.

“The French Navy-Shipowners Meeting illustrates the close ties between the two navies and their commitment to work together for a safer shipping world. It brings together representatives of all French shipping companies as well as various components of the French Navy (EMO Marine, CECLANT1, MICA Center). Over the course of a day of talks and visits, the event provides participants with the opportunity to engage in high-level exchanges on the most topical issues. In 2021, we dedicated the meeting to improving mutual knowledge with regard to the fight against drug trafficking and to consider new synergies in information sharing and training.”

Pierre-Antoine Rochas, Technical, security, safety and port affairs officer at Armateurs de France

This special relationship is very valuable to French shipowners. It is also illustrated by the increased sharing of feedback and the strengthening of mutual knowledge, through numerous theme-based meetings with, as a highlight, the French Navy/Shipowners Meeting organised in Le Havre in November 2021 (see quote from Pierre-Antoine Rochas).

Armateurs de France also works actively alongside the CSM2 and with its institutional partners (CS7, ECSA3, etc.) by making the voice of French shipping heard.

Cyber security: reinforced support

Like any business sector, the maritime industry is facing growing numbers of cyber threats. Company headquarters and port infrastructures are exposed to ransomware, phishing and identity theft, and ships to AIS4 and GNSS5 jamming. Strengthening the protection of operational and information systems is essential: it is a strategic issue for this high-value-added sector of activity.

Armateurs de France supports the maintenance of a regulatory framework adapted to the specificities of shipping and supports its members in bringing their ships into compliance with the IMO6 regulations that came into force in early 2021. The organisation also represents shipowners with the IMO2 and the associated France Cyber Maritime.

Similarly, in collaboration with its associate members (Besse, PwC), it organised a dedicated webinar and workshop in 2021, while contributing to the production of an ANSSI7 publication for decision-makers in the sector.

Maritime regulations

Active on all fronts, Armateurs de France assists its members in matters of regulatory compliance and represents them at the Central Safety Commission, which examines proposals for ships flying the French flag. At the same time, it participates in the regular review work led by the Administration, to adapt its requirements to technical developments and the emergence of new operational constraints. Such was the case for the deployment of a passenger travel data collection system for maritime transport (PNR-M11) or the repair in France of ships powered by LNG.

71 seafarers kidnapped in the Gulf of Guinea

317 acts of piracy and robbery reported worldwide, a decrease of 15.5% compared to 2020

ARMATEURS DE FRANCE

ANNUAL REPORT 2021/2022

30

ARMATEURS DE FRANCE

31
The European Union has introduced a comprehensive legislative package aiming to give structure to the low-carbon transition and the modernisation of its merchant navy fleet. This translates into significant progress in the areas of environment and sustainable finance.

Armateurs de France plays an active part in European institutional activities to protect the competitiveness of the different sectors it represents.

Rising to the climate challenge

On 14 July 2021, the European Commission published its Fit for 55 package of legislative proposals to accelerate the fight against climate change and put the European Union on the road to net zero carbon. This set of regulations implements the objective of the Climate Law adopted by the Council in December 2020, which aims to reduce net emissions by 55% by 2030 compared to 1990 and achieve carbon neutrality by 2050. Among the major initiatives impacting shipping, Armateurs de France is keeping a close eye on the revisions of the ETS directive, those on renewable energies and energy taxation, and the introduction of a regulation to facilitate access to alternative fuels: FuelEU Maritime.

Strongly committed to the ecological and energy transition, the organisation supports all the objectives pursued and is mobilising to find international solutions that comply with the principle of technological neutrality, guarantee a general harmony between the various legislative texts in the package, and provide access to the funding that is essential for the greening of vessels. Another point of increased vigilance: the timetable for implementing the measures must take into account the availability of technical solutions and alternative fuels. It is essential, for example, that the European Union articulate the Fit for 55 package in such a way that a review clause for the regulatory objectives defined can be aligned later. Armateurs de France considers it essential that emission reductions achieved by each fuel type be calculated over the full life cycle, and that all texts pursue the principle of technological neutrality. Indeed, innovations require R&D&I to be conducted into technological performance and scalability. The development of hybrid solutions and synthetic fuels is therefore essential.

Other, more operational measures such as reducing the speed of certain vessels, also constitute an immediately applicable low-carbon solution. These measures should also be used as incentives in funding decisions.

Funding the transition

Finally, any ambitious legislation must be backed up by an appropriate investment financing policy. This is why part of the revenue generated by maritime transport and services under the ETS must be channelled back into the sector to help finance innovation projects. It is also expected that specific funding windows will be created devoted to the energy transition of vessels on a European scale. In short, European shipowners are asking for support for R&D&I, technology deployment and investment to renew and develop their fleets.

The targeting of funding will also have to respect the alignment with the IMO trajectory of greening criteria, the principle of technological neutrality and ensure a fair competition framework for the different sectors of activity, as provided for in the taxonomy regulation.

Armateurs de France uses its power of influence with national and supranational bodies to address European issues. We are very involved at European level and are a driving force for new proposals within the working groups and executive committees of ECSA, the European body that brings together the national shipowners’ associations. Once again this year, we held regular meetings with the MEPs of the French delegation to the European Parliament and with the heads of the French permanent representation in Brussels.
